Hazeldean Merinos Monaro Ram Sale 2016

Thursday 27th October
Hazeldean, Cooma, NSW
Commencing 1pm

Hazeldean Hugh 11-003542

Hazeldean Hugh is a very exciting Poll Merino ram we have bred and progeny tested at Hazeldean Cooma and Hay. He is a long bodied, very correct ram who carries a large fleece of stylish, long stapled, white wool. He is a very uncomplicated sheep with a productive skin and super sound structure.

Hugh is sired by Stockman Jim out of a HAZ 2.9558 ewe, combining two well proven genetic lines. A trait leader for Yearling Clean Fleeceweight, Yearling Fibre Diameter and Yearling Staple Strength -currently sitting at the top of the MP+ and FP+ indexes. Hugh is already having a huge impact across the industry with semen used in many leading studs and flocks. Leading progeny tested ram at Hazeldean.

24 sons in the sale

Top 1% for Fleece weight & fibre diameter

Top of the breed for FP+ and MP+ indexes

HAZELDEAN MERINOS MONARO RAM SALE 2016

140 Merinos Poll & Horn

Inspections from 10am

Thursday 27th October 2016
Hazeldean, Cooma, NSW
1pm

Catalogue can be viewed at <http://sgsearch.sheepgenetics.org.au/Sales/>
and compared to other industry rams for sale

Dear Merino Breeder,

We are very pleased with this draft of young rams and particularly the influence **Hazeldean Hugh 11.3542** has had on our program. 20 sons of this outstanding sire are catalogued and represent an ideal opportunity to secure leading genetics from one of the industry's most proven and prepotent rams sitting at the top of index ranking.

Also in this draft are sons of **Hazeldean Haricot 11.43** who stamps his progeny with a very stylish wool preferred by buyers and very suitable to high rainfall environments. Other sires include high performing **Hazeldean Amicale 12.4059** who topped the June shearing sire progeny average for raw fleece weight. Amicale is a very soft handling fine wool ram who breaks the fibre diameter fleece weight conflict in great style.

Also included are sons of 2 high performing outside sires – **Nerstane 10.958 and Centre Plus 907538**. Both these sires are independently proven high performance sires with large numbers of progeny to give certainty to expected progeny performance.

Hazeldeans program is all about maximising the fundamental profit driver in agriculture – returns per hectare. Wool is still the most important determinant when analysing returns from a merino operation and growing more wool per hectare is what it's all about. Huge sheep might look appealing in the paddock but it is important to understand that the maintenance requirements of these animals is higher and therefore fewer can be run per hectare. They might cut a lot of wool but increasingly the evidence points towards less production and profit per hectare with very large bodied sheep.

Breeding is about balance and correctly prioritising selection criteria so that profit per hectare is always paramount.

We look forward to seeing you on sale day.

Regards,
Jim Litchfield

HAZELDEAN
LITCHFIELD

Stud History

With the acquisition of Rambouillet and Tasmanian bloodlines, James Litchfield established the Hazeldean Merino Stud in 1865. Occasional introductions based on Riverina Peppins occurred between the 1800's and 1958, when the Stud was closed. In 2000 the stud was reopened to access outside rams that have performed better than Hazeldean rams in Central Test Sire Evaluation and Sheep Genetics evaluation.

Hazeldean is a distinct strain of Australian Merino noted for its constitution, large frame and reputation in bloodline comparison trials, where it consistently demonstrates an ability to turn grass into dollars more effectively than other bloodlines. Hazeldean blood performs at the top in all major wool growing areas of Australia, and generally surpasses all other studs in profitability analyses.

Hazeldean has been under the direction of the Litchfield family for five generations and is one of the nation's oldest studs. It is also the oldest performance-based Merino stud in Australia.

In 1954 the Stud pioneered the adoption of a selection system based on measurable, commercially relevant traits, essential to the maximisation of profitability. The same system, although much enhanced through modern technology, remains the cornerstone of the Stud today.

The Hazeldean Breeding Policy

The special treatment of small groups through shedding and provision of artificial ration is at odds to the philosophy of the Stud. To give accurate and meaningful measurement information, it is necessary to evaluate animals by running them in large contemporary groups under conditions equivalent to those experienced in the world of commercial wool growing. Hazeldean therefore runs its stud operations along the lines of a commercial wool growing and breeding enterprise.

Hazeldean bases its selection decisions and grading for sale on a measurement system that has been in place for many years. Measurement, when applied with common sense, significantly improves the accuracy of selecting for heritable traits of economic importance such as fleece weight and fibre diameter.

Hazeldean Flock Health Status

The Hazeldean flock is assessed under the National Johne's Disease Market Assurance Program and holds a status of Monitored Negative 3 Vaccinated (MN3-V).

The Hazeldean flock is also accredited as Brucellosis free.

Explanation of Terms Used

To Express Measurement Details

An estimation of each ram's genetic worth relative to the average of his contemporaries is provided on each sale lot.

The measurements in the catalogue refer to the Australian Sheep Breeding Values (**ASBVs**) for each animal. An index and rank value are also included.

Australian Sheep Breeding Values (ASBVs):

ASBVs describe the expected performance of a ram's progeny. Although actual measurements of fleece weight, fibre diameter etc are a good guide to the performance of the ram's progeny, adding the measurements of relatives to the calculation allows the likely breeding value of the ram to be more accurately represented.

Accuracy is represented as a percentage and is a reflection of the amount of information that is available to calculate the ASBV.

FD (Dev) - (Fibre Diameter Deviation) - Represents the difference in fibre diameter measurement relative to other animals included in Sheep Genetics evaluation. The measurement is established by assessing a small sample of the fleece taken from the mid-side or the hip of the ram as well as including fibre test information on all relatives tested including brothers, sisters, parents, uncles, aunts etc. A negative figure indicates the ram is estimated to breed finer than average, a plus sign indicates the ram is estimated to breed stronger.

CFW (Clean Fleece Weight) – Rams with a higher clean fleece weight are estimated to produce progeny that cut more wool. Again this is assessed by weighing the fleece of the ram and including fleeceweights taken on all relatives

FDCV% (Co-efficient of Variation of Fibre Diameter)

It is impossible for sheep to have all their wool fibres exactly the same micron – the fibres on a sheep's back vary from fine to strong and the FD measurement is an average of all these fibres. However, some animals have less variation than others and are described as having lower fibre diameter coefficient of variation (FDCV). A lower CV% is often associated with higher staple strength therefore sheep with a small variation about the average are described as having “a good CV”. CV is also important as wool can be spun into a finer yarn if it has a low CV.

WT(kg) – Animals with a more positive ASBV for weight will produce lambs that grow faster and therefore reach target weights in a shorter period of time.

HAZELDEAN
LITCHFIELD

Index Values

Each sale ram has an index describing its overall value. The index includes the traits of most value in Merino sheep (such as fleece weight and fibre measurement) and puts them together into one figure. This makes selection easier as it removes the need to weigh up fleece weight and fibre measurement independently when selecting rams.

It is also possible to put more emphasis on reducing fibre diameter, increasing fleece weight (or vice versa) or improving any other characteristic through the use of an index. This can be done by applying different weightings to each trait when calculating the index.

For example, as Hazeldean wishes to reduce fibre diameter at a faster rate than lifting fleece weight, we place a 7% premium on the value of fibre diameter in the calculation of our index. We also want to improve staple strength. Because Co-efficient of Variation (CV%) is correlated to Staple Strength, the Hazeldean Index places emphasis on lower CV% as a means to improve this trait.

Index Value's in this catalogue therefore represent each ram's combined performance for all measured traits plus information gathered on all measured relatives.

Information from Relatives

We all know that some rams will breed worse than they appear and some will breed better. This is either due to the influence of environment or genetics.

In the instance of **environment**, for example, rams that spend their entire lives in the ram shed and fed special rations each day are more likely to breed worse than they appear whereas rams who are weaned early, spend their first year in drought and go without a drop of TLC from then on are more likely to breed better than they appear.

In the instance of **genetics**, a high performing ram coming from a long line of high performing animals is more likely to breed better than a high performing ram coming from a line with low performing animals in it. If information on relatives (brothers, sisters, aunts, uncles, grandparents as well as sire and dam) is included in the assessment of an animals index, the likelihood of the ram having an accurate index ranking reflecting his true value, is much enhanced.

Semen Sales

Semen is available from our top sires.

A current list of our semen sires is available on our website: www.hazeldean.com.au on our **Merinos page** or contact Jim Litchfield on 02 6453 5555.

The 2016 Hazeldean sale rams are amongst the top end of all industry 2015 drop rams. The average ASBV's across the whole sale team are far better than industry average for fleece weight, fibre diameter and the FP+, MP+ and DP+ indexes. They will greatly increase fleece weight and improve wool quality.

This year's group of Auction rams has an average MP+ Index of 155% which puts the average of these rams in the top 10% of Industry as a group. It would be very hard to find a line up rams elsewhere with this type of performance.

The spread of breeding values on the rams are industry leading; **100% of these sale rams are in the top 10% or better of the Merino breed for at least one trait.** Coupled with the type and style of the rams, they are balanced to boost your bottom line.

Rams will be available for private selection following the sale or any other time by appointment.

Hazeldean Ram Sale Average ASBV's compared to Industry

	YFD	YCFW	YDCV	YWT	MP+	7%
HAZELDEAN MONARO RAM SALE AVE	-2.0	21.1	-0.4	1.1	155	170
Merinoselect INDUSTRY AVE for all 2015 born animals	-1.0	11.2	-0.6	3.8	132	NA

Hazeldean Sale Rams cut more wool that is of higher value, on sheep with lower maintenance requirements, giving more profit per hectare.

Trait contribution to profit

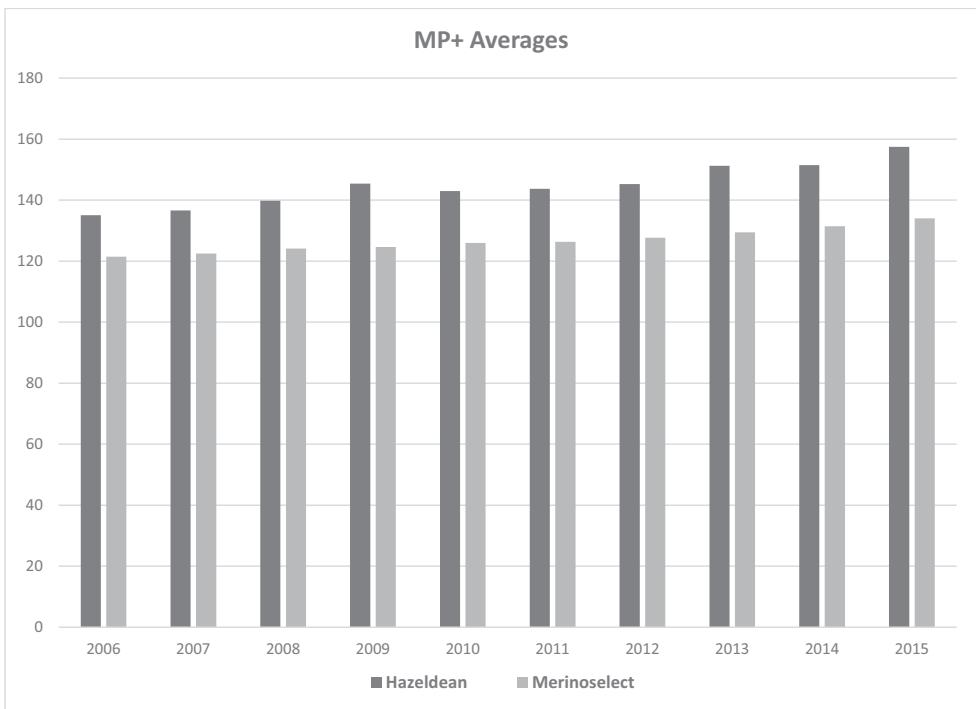

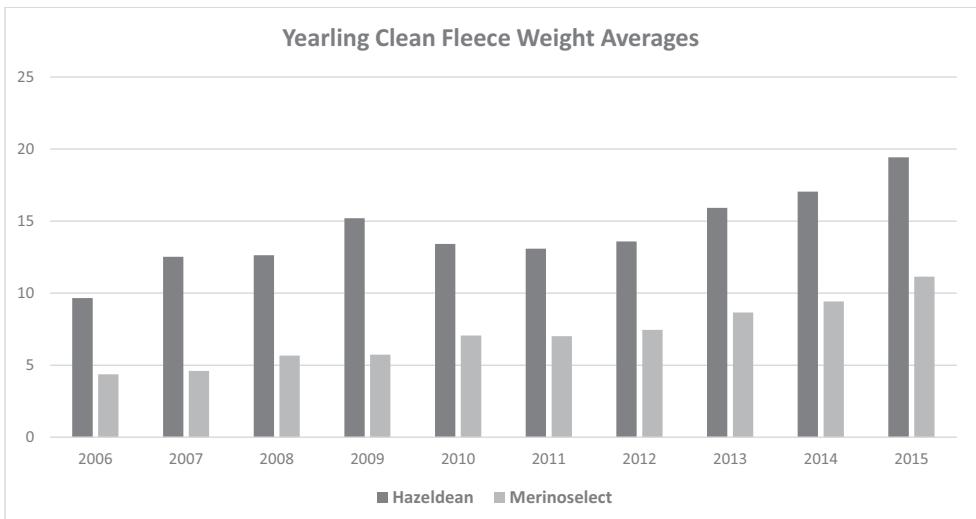

We have been utilising the **7% index** over the last couple of years in order to distribute the selection pressure to **increase wool cut** and **lower micron** with **a slight boost to live weight**. Staple strength is not forgotten but is maintained to be slightly improved.

The **2015 sale rams were graded using the 7% index** as well as being assessed for **soundness and wool quality**. It's exciting times for the stud with many of our sale rams trait leaders across the industry. With the introduction of full pedigree and the integration of genomic technologies – we're busy –and it's rewarding to see **our genetics are unparalleled in improving your flock's profitability**.

GFW	Greasy Fleece Weight
CFW	Clean Fleece Weight
FD	Fibre Diameter
WT	Liveweight
NLW	Number of lambs weaned
SS	Staple Strength
WEC	Worm Egg Count

Hazeldean flock compared with breed genetic trends over the past 10 years. Our genetic worth is proven – we continue to be leaders in the traits that make the difference. All giving higher returns per hectare.

PETER WESTBLADE MEMORIAL MERINO CHALLENGE FINAL RESULTS 2014- 2016

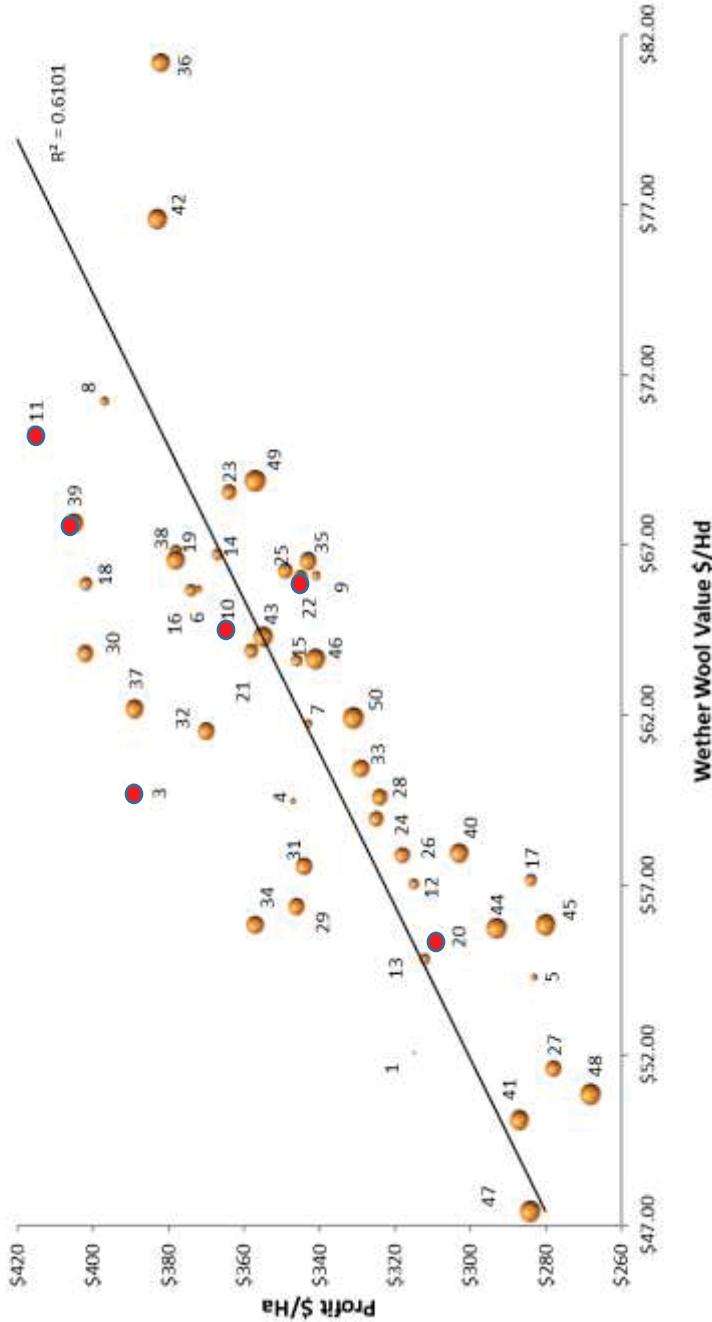

160 teams have entered the PWMWC since 2010. This is the 3rd trial of its kind and has seen 50 commercial breeders enter teams, from 39 bloodlines.

● denotes teams that are pure Hazeldean blood or Hazeldean base, most of which are in the top of the quadrant for greater Clean wool weight and finer micron.

PETER WESTBLADE MEMORIAL MERINO CHALLENGE FINAL RESULTS 2014- 2016

GrassGro Profit and Wool Value relationship

- Denotes teams that are either pure Hazeldean blood or Hazeldean base

Hazeldean Haricot 11-000043

Hazeldean Haricot is a Poll ram sired by Coromandel Sir Thomas. A beautifully balanced sire with great growth, fleece weight, he has an elite wool type with superior style and handle. Haricot has been very potent in stamping his progeny at Hazeldean with this lustrous wool and in volume. His ewe and ram progeny are early maturing with consistency of type, and real standouts amongst their contemporaries. A trait leader for all indexes, in the top 10% for Yearling Weight Haricot brings some very worthwhile traits to our program.

12 sons in the sale

Top 2% Fleece weight Top 10% Yearling weight Top 1% FP+ and MP+ indexes
