

Trait contribution to profit

We have been utilising the **7% index** over the last couple of years in order to distribute the selection pressure to **increase wool cut and lower micron with a slight boost to live weight**. Staple strength is not forgotten but is maintained to be slightly improved.

The **2015 sale rams were graded using the 7% index** as well as being assessed for **soundness and wool quality**. It's exciting times for the stud with many of our sale rams trait leaders across the industry.

With the introduction of full pedigree and the integration of genomic technologies – we're busy –and it's rewarding to see **our genetics are unparalleled in improving your flock's profitability**.

GFW	Greasy Fleece Weight
CFW	Clean Fleece Weight
FD	Fibre Diameter
WT	Liveweight
NLW	Number of lambs weaned
SS	Staple Strength
WEC	Worm Egg Count
